Booking Information

The above rates indicate a 10% occupancy of the advert location. Maximum exposure available is 100% in all banners apart from the top and bottom rectangular banners that have 200% available exposure. Occupancy refers to how frequently a given advert is displayed in a page or set of pages. For example, 100% occupancy of the leaderboard banner in the home page would

cost €1,750 + VAT per week. Alternatively, 20% occupancy of the same advert would cost €350 + VAT per week. Occupancy of any location is sold at a minimum of 10% with 10% increments thereafter. A 25% surcharge applies to increase the allowed file size by 50%. For example, a Leaderboard banner at 10% occupancy in the homepage would cost €218.75 + VAT per week.

Google expects to restore all Gmail accounts

Google said today it expects to fully restore the Gmail accounts of users who saw their emails deleted from their inboxes over the weekend.

"We hope to have everybody back by the end of the day," said Andrew Kovacs, a Google spokesman. "It is our expectation that we will restore all accounts."

Google said less than 0.02 percent of the users of the free Web-based email service had been affected by the problem, fewer than previously reported.

Google had said earlier the problem affected 0.08 percent of Gmail users.

Google does not release official figures for the total number of Gmail users but they are estimated to number around 200 million.

Gmail disruptions, while rare, are seen by some industry analysts as a setback to the Mountain View, California-based Google's efforts to promote Gmail and other Web-based services to businesses.

To get going post-install the Stylish plug-in here, then install FirefoX. Once you're back up and running, click the download button on this page and enable the new look from the plug-in options menu under Tools -> Add-ons. When you return to Gmail it will be dark and mysterious.

Besides your in-box, the add-on skins the compose page, the Google Talk side bar, and entire conversation strings. This is one thing actually improved in the transition, as the color-coding of the conversations (which go from colored windows to having colored headers) makes it easier to parse through multithreaded communications.
